TO WHOM IT MAY CONCERN

This is to certify that Mr. Kashif Mahmood completed an internship as a Data Analytics Intern at BrandPur in Sargodha from June 2024 to August 2024. As part of the analytics team, he worked with customer data to analyze repeat-customer behavior and identify patterns associated with customer churn.

His work involved data analysis and visualization using Python, including Pandas, Matplotlib, and Seaborn, as well as developing dashboards in Power BI to communicate findings to the team. His main technical contribution was the development and evaluation of a customer churn-prediction model using prepared data. He evaluated multiple machine-learning models and compared their performance to identify an appropriate predictive approach for estimating the probability of individual customers leaving.

The resulting predictions were used by the team to identify at-risk customers and design targeted retention packages, which contributed to an approximately 10% increase in customer retention. This work connected predictive modeling with a practical customer-retention strategy and demonstrated Kashif's ability to apply machine-learning techniques to a real-world business problem.

Throughout the internship, Kashif worked effectively within a small analytics team and communicated analytical findings clearly to support practical business decisions. His work demonstrated strong analytical ability, technical initiative, and an ability to translate machine-learning results into actionable business insights. Should you require any further information, please feel free to contact us.

Sincerely,

Chief Executive Officer
